

**Appln No. 10/712,601**  
**Amdt date November 22, 2005**  
**Reply to Office action of June 7, 2005**

**Amendments to the Specification:**

Please replace the last paragraph of page 5, line 29, bridging to page 6, line 9, with the following:

Roll label printers are ideal for printing NetStamps™ style of postage indicia. A problem with printing NetStamps™ however, is ensuring that users correctly provide the serial number into software before printing is initiated, because if the wrong serial number is put into software, the printed NetStamps™ will be defective. With roll label printers, once a roll is loaded into the printer, it is difficult for the user to see the serial number on the label. This problem is not experienced with unprinted sheets of NetStamps™ labels, which a user handles before being placed into conventional label printers.
